

HYDRAULIC WHEELSET PRESS

The press is applicable for mounting and back-pressure test of wheelset for normal wagons, all types locomotive and EU trains.

The control system provides full control over the mounting process and during the back-pressure test. The mounting force and the position of the wheel relative to the axle seat are recorded.

ADVANTAGES OF HPE 8 SOLUTION:

- Two-sided automatic operation
- Processing up to 4 sets per hour
- Low operating costs due to full automation
- Continuous control during the process
- It is possible to check the accuracy of the wheelset
- Report generation
- Advanced security systems
