

RAILWAY WAGON PUSHER Ankylo

The device is used to move heavy loads in a rolling stock repair railway facilities. The specially adapted shape of the buffer allows the handling of wagons with different heights of railway buffers. ANKYLO is an unparalleled aid in shifting railway wagons or bogies.

The operation of the device is very intuitive and safe. The use of lithium-ion battery means fast charging and longer availability. The device is ready to take over tasks for which rail-road tractors, which are several times more expensive, are commonly used.

ADVANTAGES:

- Possibility to move heavy loads
- Intuitive and safe operation
- Fast charging and longer device availability
- Cost several times lower than a rail-road tractor
